Helping YOU Use Computers More Efficiently

STUPID COMPUTER TRICKS **2014**

Print Screen Key

Print Screen key actually works.

Pressing the Print Screen key will capture a screenshot of whatever is on screen and send it to the Clipboard.

Then you can open an email and press Ctrl+V for paste into your email.

Double clicking the picture in the body of the email brings up the picture formatting menu items, my favorite is to crop the image before sending the email.
