Helping YOU Use Computers More Efficiently

STUPID COMPUTER TRICKS **2014**

Windows Calculator

If you're like me you use the calculator of your computer more than a regular desk calculator.

In a previous Stupid Computer Trick I taught you how to set shortcut keys to the calculator for quick access.

But did you know the calculator included in Windows can do a lot more than just math?

The calculator also offers many different unit conversions, like miles to kilometers, feet to meters, days to hours.

It even has a feature that will calculate how many days between two different dates, good for figuring out how many days until vacation.

The calculator also has other worksheets like vehicle mileage calculations, mortgage rates and much more.

All of these extra cool items can be found under the VIEW menu of your standard Windows calculator.
